

Once you have experienced satellite radio there is no going back to commercial radio. We travel a lot and it is a great convenience to get a heads up on the traffic and weather for the cities that we are going to visit. The programing that satellite radio has to offer is far more superior than what we hear on tha AM & FM Band. Sure we pay for this service but it is well worth it. We have seven XM Satellite receivers registered with XM. That must tell you something. I urge you to please reject NAB's petition 04-160.
